

More playful kitties like to pull the mesh filter out of the ring. This can be prevented by pushing a short stainless steel wire through the underside of the mesh filter (see picture).

Be careful, there might be sharp edges at the wire.

For better pre-filtering results, you can widen the sieve (as in picture #1, upper sieve; lower sieve is in original shape) and fill it with Aquarium Filter Insert Foam or Aquarium Filter Wool Pads. Just cut to size and insert into the mesh filter as shown in the pictures below:
