

Ebi's Reusable Bio Filter

1. Fill 1/4 cup of carbon into the filter bag (do not overfill or the fountain's water pressure may be impaired). Rinse under a faucet until the carbon dust is rinsed out (so water runs clear).
2. Put the bag into the cartridge so that the side seam is at a 90° angle to the brass nipple

3. Fold the top seam over twice toward the brass nipple
4. Push the fold inside as shown in the picture (below, right)

5. Screw the cap on and connect pump and spout

Wash cartridge and bag with mild detergent or vinegar solution and change carbon every 4 weeks or as needed. Bag can also be laundered. Bag is of extra heavy duty material for long life, but should you require replacement/extra, they are available on our website for \$5.00 (ships free). **Carbon is available at:** <http://www.bulkreefsupply.com/store/3-pounds-gallon-special-grade-bituminous-aquarium-carbon.html>, or in the aquarium section of your pet store.
